AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning on page 31, line 8 with the following amended paragraph marked up to show changes made relative to the immediate prior version:

Referring again to FIG 12, the agreement document may be automatically transmitted <u>at</u> <u>1206</u> to the counter-party via the counter party communication address. For example, the agreement document may be automatically transmitted to a counter-party facsimile machine after being viewed and approved by a user (*e.g.*, after the terms of the agreement have been negotiated as described herein). According to another embodiment, the agreement document is instead published via a secure Web site so that it may be accessed by the counter-party. In this case, a URL address and/or a password may be transmitted to the user or to the counter-party.

Please replace the paragraph beginning on page 31, line 26 and ending on page 32, line 8 with the following amended paragraph marked up to show changes made relative to the immediate prior version:

FIGS. 16A and 16B are block diagrams of agreement modeling system functions, applications, and interactions according to some embodiments of the present invention. In particular, FIG 16A presents an engine-level overview of the client device 10 and the agreement modeling system controller 1000 according to one embodiment. The client device 10 includes a display engine ~~1902~~ <u>1920</u> that may be used to exchange information with a user (*e.g.*, by receiving information from and displaying information to the user). The display engine 1920 may comprise, for example, a typical WINDOWS® style Multi-Document Interface (MDI) application. Such an application may simultaneously display one or more agreements. Some examples of user displays that may be processed by the display engine 1902 are described herein with respect to FIGS. 23 through 25.
